

V Series Solids Handling Pumps

Engineered for high performance in demanding environments, the V Series pumps are designed to handle sewage with suspended solids efficiently. With versatile, high-flow capabilities, they are ideal for applications such as water treatment plants, industrial facilities, farming, and sewage systems.

FEATURES

- **Vortex Impeller:** Suitable for pumping unfiltered sewage and fibrous liquids
- **Seal Minder® Probe:** Standard on all series providing enhanced monitoring for seal condition
- **Cable Gland:** Stainless steel AISI 316, standard on all models
- **Thermal Protection:** Supplied with 2 thermal switches in the motor windings to protect against overheating

BENEFITS

- **High-Performance Sewage Handling:** Vortex impellers designed for pumping sewage with solid & fibrous parts
- **Long-Term Durability:** Mechanical seals and the Seal Minder® probe ensure extended service life and reliability
- **Corrosion Resistance:** Stainless steel components guarantee long-lasting performance in harsh environments

MATERIALS

- **Cast Iron Housing:** GG25 grey cast iron for robust construction
- **Vortex Impeller:** Designed for unfiltered sewage with suspended solids
- **Stainless Steel Components:** Cable glands and external components made of stainless steel for corrosion resistance
